

Bubble Skatzz

BUBBLE SKATZZ COMPANY LIMITED
ONE STOP SHOP FOR ALL YOUR SKATEBOARDING NEEDS

Our Story

At Bubble Skatzz, we care about every board, every design and every delivery we ship, right down to the smallest detail.

We've always loved using our passion and hard work to bring new ideas to life, so when a new opportunity came up, we never looked back. Our story starts many years ago in India where we built a successful furniture business, but it ends somewhere very different...

In 2007 we decided to open up our creativity and embrace a new project in a new country: we would head to China and create pro-quality skateboards.

At the time it sounded like a crazy dream and one that would take many years, but we never looked back.

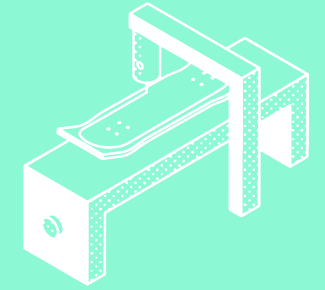

By getting the small details right every step of the way, we gradually grew and grew into the business we are today. Not only are we the world's first woman-owned and India-owned skateboard manufacturing company, we're also one of the biggest. Now that you know our story, it's time we helped you write yours...

At Bubble Skatzz, we care about every board, every design and every delivery we ship, right down to the smallest detail. As a global skateboard manufacturer, we work with brands and distributors from all over the world. One day it could be delivering a massive order for one of the biggest brands on the market, the next it could be helping aspiring startups get their own label out there.

Why Us?

What sets Bubble Skatzz apart from other skateboard manufacturers or agents?

RESPONSIBLE MANUFACTURING

We only work with certified wood vendors who responsibly source from sustainable hardwood forests. All the waste is 100% recycled.

QUALITY CONTROL

Strict QC at various product production stages further guarantees a premium quality product.

RELATIONSHIPS

With no middleman or agent fee involved, you will get an easy access to professional quality skateboards, manufactured and delivered at

EXPERIENCE

Over the years, Bubble Skatzz, with its meticulously carved services and products, has earned respect and trust of its customers.

INNOVATION & DEVELOPMENT

We constantly upgrade our machinery and system to keep our manufacturing unit up to date.

QUALITY SERVICE

Impeccable service and attention to detail is what sets us apart from others.

Our English-speaking staff (for easier communication) is available 7-days a week, ensuring our customers receive products optimized as per their needs.

Longboards

CUSTOM SHAPE OPTIONS

LONGBOARD SHAPE OPTIONS

KICKTAIL AS PER CUSTOMER REQUEST

ROCKER

When the pan of the deck dips down. Rocker allows for the board to “cradle” the rider when throwing slides. It lowers the middle of the platform so that riders have their feet more angled to the trucks, rather than over the top of the trucks. This allows for more control in slides. In some rare cases, Rocker can cause the rider to induce sudden and weird speed wobbles. We always recommend working your way up the speedometer to help ensure your safety.

CAMBER

When the pan of the deck is raised up. This usually allows more energy to be stored in the board as the pan will be designed to flex down flat when the rider is standing on it. Like Rocker, Camber can put the rider in a precarious position at high speed. A flexy board tends to be less stable and a stiff board with camber puts the rider above the trucks (high center of gravity). Both of these makes the board susceptible to rider errors and thus speed wobbles.

FLAT

The majority of longboard decks are flat-have no camber or rocker, though some cruisers and longboards feature camber-style decks. Very comfortable concave. Great for board walking Recommended: Dancing and Slow-Cruising

KICKTAIL

A bent/upturned tail or both upturned nose and tail (Kick) Recommended: For various tricks like Ollie, etc.

✓ SEND US YOUR SHAPING FILES AND WE CAN CREATE CUSTOMIZED SHAPES, ACCORDINGLY
HIGH PRECISION MACHINES ARE USED FOR MAKING CUSTOMIZED SHAPES

LONGBOARD CONCAVE OPTIONS

DIFFERENT CONCAVE OTIONS FOR

RADIAL

Most common concave.
Recommended: Carving, Free-Style and Downhill

W-CONCAVE OR W

Extra curves (usually found in just one area of the skateboard) lend support, while maintaining foot control during drifting and sliding
Recommended: Downhill and Free-Style

CONVEX

Least common kind of concave. In this, the board arches up and not inwards and mimics foot arch
Recommended: Cruisers

ASYMMETRIC CONCAVE

Stance dependent. Allows the rider to choose as per his/her front and backside styles
Recommended: Carving and Downhill

TUB/FLAT-CAVE

Quite similar to Radical. Helps keep feet flatter and is perfect for a mellow ride
Recommended: Slow Cruising

PROGRESSIVE

A mix of flat and radical concaves, that forma s continuous arch Recommended: Carving, Cruising, Downhill and Free-Style

FLAT

Very comfortable concave. Great for board walking.
Recommended: Dancing and Slow-Cruising

Surf/skates

SPECIALIST IN SURF/SKATE SOLUTIONS

We offer all the components you need to build a complete surf/skate. Spot colour & CMYK printing and various customized packaging options available.

DECK MATERIALS

Hard rock maple, Bamboo, Fiberglass, carbon, and engineered wood
